10	335	104
12	425	110

Measuring an Axle Length and Width	
A = Tip to Tip	
Measurement from end of dust cap to opposite dust cap, using straight edges	
B = Face to Face	
Measurement from wheel mounting face to opposite wheel mounting face	
C = Axle Width	
Diameter of axle bar, either round or square	

How to Read Tyre Sizes	
Measurement on the tyre sidewall (i.e. Highway Tyre 235/75 R 16)	
* 235 is the section width of tyre in mm	
* 75 is aspect ratio (sidewall height) in relation to tyre width. As percentage	
So 75% of 235mm = 177mm edge of wheel, to top of tread	
* 16 is the rim diameter in inches	
See further detail below

ADR Group History

In the beginning -1954/1970

For the Radrizzani family, year 1954 represented the beginning of a period full of sacrifices and success. Giovanni and Antonia Radrizzani started manufacturing mechanical works on somebody's else behalf. This initial little business became, already in the early 60s', a company manufacturing discs for wheels. The entry into the Company of the eldest son Giancarlo coincided with the start of the production of agricultural axles. At the beginning of the 70s' the youngest son, Flavio, also joined the company and together with Giancarlo started promoting the first exports to Europe.

Recent history - 1970/2000

The period from 1970 to 2000 was characterised by an expansion on the international markets and by the transformation of Giovanni Radrizzani snc into ADR spa, manufacturing axles. As for the wheels, a new Company was founded, named Italruote.

In the 90s' ADR, confident of a production of quality, expanded more and more its presence on the market, by starting a proper internationalisation process beginning with the take over of the French Company COLAERT ESSIEUX, European leader in the production of axles and complete suspensions for agricultural and industrial machines of TYREMART, its trade branch in the United Kingdom. In the same period Italruote relocated Friuli was taken over by the local CLM. In 1996 ATW, a Polish Company outpost for the Eastern Europe markets and strategic pole for the component manufacturing of the whole ADR Group, was founded.

The third Millennium

From 2000 on ADR Group has been strongly engaged in its strengthening. Great investments have been approved and the building of new premises to host the future business of the ADR Group has begun. With the creation of RPF holding the new financial and organisational restructuring has begun as well as the Asian and South-American expansion with joint-ventures in China and Brazil.

In 2014 ADR Australia was formed, with the objective to provide the Australian Agricultural industry, premium products and services with a greater local presence. The Australian market demanded innovative and specific manufactured products for harsh Australian conditions. Working closely with Australian machine manufactures, and our commitment to engineering and design excellence - lie at the heart of ADR Australia's growing reputation for outstanding products and service.

Comprehensively, the current ADR Group is based in twelve facilities located in Italy, France, England, Poland, China, Brazil, Canada, South Africa, Australia and India. Which together occupy a covered surface area of 180,000 square meters and employ approximately 1040 people. Who sell the group's products in all over the world with a consolidated average growth rate of 10 percent annually.

ADR Technology and Environmental

Research, Development and Testing

ADR collaborates with internationally renowned universities, the most highly-qualified vehicle manufacturers and the world's major regulatory bodies. Our development of new products is the result of the constant testing of new technical solutions and the simulation of the most severe operating conditions.

ADR Axles are tested in state-of-the-art ADR test centres, both for their structure and braking performance. The final stages of testing are taking in the field working with major trailer manufacturers, insuring the highest quality and reliability is achieved in our products.

Developing new products and the improving production are only possible through ongoing experimentation of new technical solutions and simulation of the most critical service conditions. The fully renovated ADR test department located in the Uboldo plant allows testing the axles both from structure and braking performance point of view.

Since almost twenty years, the ADR roller test bench is the heart of the lab: thanks to a power of 500 kW it can test axles up to 15 tons. In the course of the years new more and more advanced testing machines as the inertia dynamometer have been introduced. But the final verdict is the field one with the lab vehicles designed in ADR and manufactured in cooperation with the main trailer manufacturers

Quality

The quality of a product is above all synonymous of reliability and conformity to the technical choices of the user.

To satisfy the requirements of the user, ADR Group has focused its attention on the continuous exchange of information between its technicians and the vehicle manufacturer from the very first steps of any project. Closely paying attention to the requirements of the final user, and offering solutions making maintenance easier thus reducing machine stops to a minimum. This goal has urged ADR to create targeted maintenance plans and specific spare part kits.

Quality also means research of new solutions and promotion of advanced technology safeguarding the environment.

From 2001 on ADR products are varnished with a low-environmental impact process, using water paint. The aggressive solvents and the polluting emissions in the atmosphere have been eliminated without penalizing the effectiveness and the duration of the protection.

Environmental

ADR means long-lasting quality, strength and reliability, but that is not all. In the last years ADR have linked its name to the most innovative and advanced technologies to manufacture while safeguarding the environment.

An important example is the advanced varnishing plant that finished ADR products since 2001. The varnish used is only water based, thus eliminating completely the polluting effect on the atmosphere and safeguarding the workers' health as they longer have to breathe toxic fumes from solvent-based varnish. These improvements do not have anyway penalized quality, but, on the contrary, the varnish lasts longer and resists the most hostile atmospheric agents. Once again, ADR demonstrates how you can produce without damaging nature.

ADR Teknoax Intelligent Agricultural Axles

ADR Teknoax 2.0 is the latest addition to the ADR brand. It is a new-generation axle, designed to offer farm machinery the greatest possible strength, performance and reliability in all conditions.

It is an innovative system with tubular monobloc axle body with integrated stub axles. A seamless and continuous structure, which eliminates axle stresses in the connection zone where axle body and stub axle would normally meet in standard tube axles.

This hollow profile allows implementation of remote tyre inflation/deflation systems, weight monitoring and performance monitoring systems which can be inserted internally with ease. As well as additional add ons like ADR Product Traceability System (RFID chip), allowing users to scan via smart phone app to identify corresponding components, spare parts and scheduled maintenance planning.

Making ADR Teknoax 2.0 the benchmark in axle design and technical innovation.

ADR Teknoax

Intelligent Agricultural Axles

TEKNOAX 2.0

iDevice

TECHNICAL ASPECTS

TEKNOAX 2.0 implements important features:

REMOTE TYRE INFLATION / DEFLATION SYSTEM

(based on a pressure monitoring device and a pressurised air duct) that allows quick adjustment of the internal tyre pressure, based on specific operating conditions.

WEIGHT MONITORING SYSTEM

consisting of a load cell that informs the driver of the total payload of the trailer, both for safety purposes and to optimise operating costs.

TOTAL OPERATING TIME AND DISTANCE MONITORING SYSTEM

combined with the weight monitoring system, to optimise maintenance based on actual operating conditions.

TRACEABILITY SYSTEM BASED ON AN RFID TAG

that associates each axle with a unique identification number in order to improve the end user experience, facilitating and reducing maintenance.

ADVANTAGES

Advantages of innovation **TEKNOAX 2.0** are: functional, economic, environmental and social:

- ⊗ improved mechanical, hydraulic and electronic performances
- ⊗ Increased weight monitoring and load capacity, reducing empty weight
- ⊗ Reduced operating and maintenance costs
- ⊗ Calculation of time of use and monitoring of distance travelled
- ⊗ Traceability system and availability of data for planning maintenance
- ⊗ Increased safety, reliability and service life
- ⊗ Better standardisation and modularity
- ⊗ Tyre pressure monitoring and remote inflation/deflation system
- ⊗ Improved road performance and compliance with road regulations
- ⊗ Smart devices for real-time weight assessment on board

New axle range,
with **integrated chip**.

- Identification
- Spare parts
- Maintenance planning

TEKNOAX
Future is now

www.adraxles.com

ADR Black Bull

Tube Axles

ADR Black Bull tube axles reduce axle body weight by 50%. This is the most decisive advantage that immediately affects the user. Lighter axle means a higher payload for the vehicle.

The axle body is manufactured using high-yield tubular profile, with steel that offers high elasticity to prevent road and agriculture fatigue.

The axle spindle (stub axle) is also manufactured using similar high-yield steel. Advanced research and development has defined the best type of steel needed to make these heavy duty spindles. Which offer optimal resistance to intensive working conditions and provide the best possible reliability.

Making them ideal for both industrial and agricultural use.

Fitting of Axles **WARNING!!**

When installing axles, the welding line must be horizontal to the load.
Vertical fitment is forbidden.

DO NOT weld across axle body, only length ways.
Cross welding is forbidden.

ADR Load Cell Axles

Simple Affective Weight Monitoring Systems

Single Axle - Three Point Scale System

30,000KG Max Capacity.

ADR Part	NET Price	Quantity Req.	Description	Inc. Parts
Load Cell - 2	NA	1	Load Cell & Monitor Kit	2 Spindles (stubs) and 1 Drawbar hitch with plugs fitted, 1 M640 In-cab monitor, 1 Junction box with all cables and wiring.

\$11,607 NET PRICE

M640 Monitor

The reliable user friendly compact M640 indicator fits neatly inside the cab and features grain cart functions built in (shown at right with optional CP 130 printer).

- › Accumulate and store harvest totals for 100 fields.
- › Unique alphanumeric names can be used to identify each field in reports and data records.
- › Print individual load amounts with field name, and time.
- › Export data to a PC with the optional TDM memory device.
- › 1.1" Backlit alpha numeric display.
- › Auto-print function reduces the number of key presses required during operation.
- › Standard reports for single or all fields, including field names, number of accumulations, and totals.

Parabolic Spring Suspensions Agricultural

ADR Parabolic Spring Suspensions consist of two or more leaf springs. Which touch in the middle (where fixed to axle) and outer ends (where fixed to hangers). In between those points the leaf springs do not touch as they do in conventional rigid springs.

When the machine is un-loaded the parabolic springs are more elastic, making the ride smoother. When the machine is fully loaded the springs become less elastic, and compress helping stabilize the load.

Parabolic springs are also lighter than conventional and can be used under every type of Agricultural machinery.

*Complete with 4 Spring packs with bushes fitted, 2 Front hangers, 2 Rear hangers , 2 Centre Hangers, Hanger bolts, Fish Plates & U Bolts. (KE / KW type also with 4 Support struts)

Underslung available upon request.

Axles not included.

For more information please contact our office, 02 9623 0512

Bogie Spring Suspensions Agricultural

ADR Bogie Spring Suspensions are a type of oscillating mechanical suspension with multi-leaf springs which are designed specifically for agriculture tandem machinery. Its main advantage allowing vehicles to travel across extremely rough terrain with ease, thanks to the wide oscillation movements which adapt to the roughness of the ground.

Tyre Care

Tyre Transportation

BKT tires are designed for the most differing applications in agriculture and manifold industrial sectors. Many Off-Highway tires are very heavy and difficult to be transported. Wrong transportation of a tire can cause serious damage. When transporting a tire, particular attention must be paid to make sure that neither the bead nor the inner part of the tire are damaged. Even the slightest damage of the bead can cause permanent damage due to air leakage resulting in tire underinflation and possible separation of the tire components.

In order to reduce the risk of damages or problems caused by wrong tire transportation or handling to a minimum, it is highly advised to observe the following recommendations:

- Do not lift the tire with a crane hook by leverage on the bead.
- Use large fibered straps, rubber slings or specific belts.
- Do not use ropes, steel slings or chains.
- Use a forklift for transport. The tire is to be lifted under the tread and not on the bead.

Tyre Storage

Whatever your field of application is – agriculture, earthmoving, industry, or else - Off-Highway tires are to be stored in a cool and dry place, away from direct sunlight, electric motors, oils, fuels, resins and other volatile substances in order to avoid any alteration of the chemical-physical features. Should this not be possible, at least protect your tires with a waterproof tarpaulin to avoid contact with ultra-violet rays and bad weather. Tires are to be placed vertically side by side. Do not stack one tire over the other horizontally. Tubes and o-rings must be stocked in their original packing or stored unwrapped on racks or shelves, but never suspended.

*Complete with 4 High tensile mounting bolts, nuts and washers.

Recommended torque - 26 lb/ft. Bolt hole centres - 85mm x 45mm.

WARNING:

When reversing at acute angles breakages can occur at angles greater than 90 degrees.

**If you frequently toe a ring coupling we do not recommend PH6AB or PH6B Pintle Hook and Ball combo. These can damage your tow ball over time, and are designed for more frequent towing with a standard 50mm coupling. And only occasional a ring coupling.

**If you frequently toe using a ring coupling we recommend using PH6BT Pintle Hook and Ball combo, Low wear no rattle

Custom U Bolts and Accessories

Precision engineered and built to the highest quality standards.
Our Custom U Bolts and Accessories will provide superior performance to your next project.
Custom made to suit any requirements.

AUSTRALIAN MADE.
ISO 9001-2008 approved.
Quality tested in Australia by NATA certified assurance screening.

For more information or pricing
Please fill out our ADR quote request sheet on next page, or contact our office (02) 9623 0512

Trailer Information

AUSTRALIAN DESIGN RULES AS APPLICABLE TO TRAILED vehicles LESS THAN 4.5 TONNE AGGREGATE TRAILER MASS (ATM)

Note; This information is a guide only.*Braking Info.**

- Trailers up to 750 kg GTM – no brakes required.

- Trailers 750 kg up to 2000 kg GTM – brakes required on at least 1 axle.

"Efficient" over-run brakes acceptable (Electric or Power Assisted Brakes).

- Trailers 2000 kg up to 4500 kg GTM – brakes required on all wheels.

Independent Brakes (Electric or Power Assisted Brakes acceptable) with brake control from driver whilst in driver's seat.

Must also have trailer breakaway system to automatically apply trailer brakes fully for at least 15 minutes (Electric or Power Assisted acceptable).

- Trailers above 4500 kg GTM – brakes required on all wheels.

Special Application

Terminology		
Dimension	Name	Description
TT	Tip to Tip	Total length of axle from end to end
FF	Face to Face	Length of axle from wheel mounting face to opposite face
CW	Chassis Width	Distance between outside of chassis rails
AT	Axle Thickness	Thickness of axle section (i.e.. 39mm, 40mm, 45mm, etc..)
TC	Tyre Clearance	Distance between outside of chassis rail to inside of tyre wall
BS	Back Space Wheel	Distance between inside of tyre wall to wheel mounting face
TW	Tyre Width	Tread width of tyre
TARE	Tare Mass or Weight	The weight of an empty trailer or vehicle
GVM GVW, GVWR	Gross Vehicle Mass Gross Vehicle Weight	Maximum value of what your vehicle can safely weigh including payload, also includes tow ball download if towing
GTM GTW, GTWR MGTW	Gross Trailer Mass Gross Trailer Weight Maximum Gross Trailer Weight	Maximum combined weight of the trailer and its full load, transmitted to the ground by the axle/s while coupled to a tow vehicle
ATM	Aggregate Trailer Mass	Maximum combined weight of the trailer and its full load. Not coupled to a tow vehicle

Silent Ride Rubber Suspension

Silent Ride Trailer Suspension

Quiet and smooth. These two words describe the Silent Ride trailer suspension. Any clanking and banging sounds are silenced. Rough and uneven towing quickly evaporates. And its rugged design ensures that it can endure the rough terrain of the Australian outback.

Features

The Silent Ride trailer suspension is an unrivalled design to meet a new set of standards.

- ✓ Fully Equalizing Tandem Suspension
- ✓ Exceptional Ride Quality
- ✓ Easy Bolt-On Installation
- ✓ Maintenance Free
- ✓ Durable Powder Coat Finish

Walking Beam Design

The Tandem Silent Ride trailer suspension is unparalleled. It is designed with a walking beam around a single pivot point, creating the most dynamic equalizing trailer suspension on the market.

Steel Hanger & Pivot Point

The walking beam design is a critical element, it allows the suspension arms to freely articulate around the pivot point, ensuring that the Silent Ride tandem has full equalization.

Bushings

Bonded rubber bushings are press fitted, allowing the outside of the bushing to be fully engaged in the control arm. The result is an extremely durable, long-lasting bushing.

Rebound Spring

This spring acts as a shock absorber creating constant tension on the jounce spring. This means that loaded or empty the trailer will never bounce around. You are guaranteed a safe, smooth ride at all times.

Silent Ride Rubber Suspension
